

SEO, GEO & AEO Audit Report

URL Audited: <https://globaledge.net.in/mbbs-abroad.html>

Business: MedStudy Abroad (a unit of Global Edge)

Industry: MBBS Abroad Education Consultancy — Delhi, India

Report Prepared By: Lucky Jha **Audit Date:** August 5, 2026

1. Executive Summary

The content strategy here is genuinely strong — comparison tables, country-level FAQs, myth-busting sections. But one critical technical defect undermines it: the canonical tag and Open Graph metadata point to a placeholder domain (`yourdomain.com`), not the real site. This likely hurts indexing and breaks every social share preview.

There's also a suspected second issue: Home, all 5 country pages, and ~20 university pages appear to be served under one URL/crawl path rather than as distinct indexable pages — diluting dozens of long-tail ranking opportunities.

Competitive check: A live search for “MBBS abroad consultants Delhi” shows this page is **not on page 1**. Sulekha, GIEC Global, Axis Institute, MediPedia Overseas, and others hold those spots — despite thinner content than what you already have. The gap looks technical, not content quality.

Overall Scores (out of 10)

Category	Score /10	One-line Verdict
Technical SEO	3/10	Canonical/OG error is a critical blocker
On-Page SEO	6/10	Strong content, weak keyword/heading structure
Content & E-E-A-T	6/10	Good depth, weak trust signals
GEO (AI answer engines)	7.5/10	Best asset on the page
AEO (snippets / PAA)	5.5/10	Great content, likely missing schema to win it
Local SEO	4/10	NAP present but underleveraged
Overall Page Score	5.3/10	Strong bones, weak technical foundation

2. CRITICAL ISSUES — Score: 2/10

2.1 Canonical tag points to a placeholder domain — 1/10

```
canonical: https://www.yourdomain.com/  
og:url: https://www.yourdomain.com/  
og:image: https://www.yourdomain.com/og-image.jpg
```

This tells Google the “real” version of this page lives on a domain that doesn’t exist. It can suppress indexing. It also breaks every social share preview — WhatsApp, Facebook, LinkedIn will show a broken image and wrong domain.

Fix: Replace `yourdomain.com` with your live domain everywhere. Upload a real `og-image.jpg`. Check the whole site template for this same bug.

2.2 Single-URL content sprawl (suspected) — 3/10

The fetch for this one URL returned the homepage, all 5 country pages, and ~20 university pages combined. If these aren’t truly separate crawlable URLs, Google can’t rank each university/country individually — you lose dozens of easy long-tail keywords (e.g. “Kazan State Medical University fees”).

Fix: Confirm each page has its own server-rendered URL with unique title/meta/canonical. This is the highest-leverage fix available if confirmed.

2.3 Brand identity fragmentation — 4/10

This page is “MedStudy Abroad — A Unit of Global Edge,” while the parent domain markets as simply “Global Edge” with different stats (57,000+ vs 5,100+ students). Split branding dilutes the entity signal search engines and AI systems build around your business.

Fix: Consolidate messaging and stats under one consistent brand identity.

3. Technical SEO — Score: 3/10

Issue	Severity	Score /10	Fix
Canonical/OG placeholder domain	Critical	1	Replace with live domain
Dead nav links (#)	High	3	Build or remove Blog/Webinars/NMC links
Title tag length (~72 chars)	Medium	5	Trim to ~60 chars, keyword-first
FAQ schema unconfirmed	High	4	Validate via Rich Results Test; add if

Issue	Severity	Score /10	Fix
No breadcrumb schema confirmed	Medium	5	missing Add <code>BreadcrumbList</code> JSON-LD
Generic, repeated alt text	Medium	5	Make alt text unique and specific per image
Heavy stock imagery	Medium	5	Swap in real student/office/campus photos
No visible “last updated” on fee tables	Medium	4	Add timestamp for freshness signal
No LocalBusiness schema confirmed	Medium	4	Add <code>Organization + LocalBusiness</code> JSON-LD
Meta keywords tag in use	Low	—	Harmless, no ranking impact either way

4. On-Page SEO — Score: 6/10

- **H1 lacks target keywords (5/10).** “Your Dream of Becoming a Doctor Starts Here” is emotionally strong but has no keywords. Pair it with a keyword-rich H1 like “MBBS Abroad 2026-27 — NMC Approved Universities.”
- **Multiple H1-level headers on one path (4/10)** — if 2.2 is confirmed, ~7 pages’ worth of H1s are competing on one URL.
- **Section headers are well-targeted (8/10).** “MBBS Fees in Russia 2026,” “Compare MBBS Destinations 2026” match real search intent well.
- **Internal linking is present but shallow (5/10).** No contextual links from body content back to relevant FAQs/tables.
- **CTA/conversion structure (8/10)** — strong and consistent, not an SEO issue.

5. GEO — Generative Engine Optimization — Score: 7.5/10

Working well: - Country comparison table (9/10) — exactly the structured, fact-dense format AI engines like to extract and cite. - “Top 5 Myths” section (8/10) — mirrors how people phrase questions to ChatGPT/Perplexity. - Concrete quotable stats throughout (7/10) — good, but see below.

Weak points: - No cited sources for stats (3/10) — “23L+ NEET aspirants” etc. has no link to NMC/NTA. Add sources. - No author/expert attribution (2/10) — no counselor name or credential anywhere. Big trust gap for a high-stakes decision. - Thin testimonials (4/10) — first name + initial only, no verifiable link. Link to Google Reviews. - Entity confusion hurts GEO (4/10) — same brand-split issue as 2.3.

6. AEO — Answer Engine Optimization — Score: 5.5/10

- FAQ content quality (8/10) — genuinely well-written, matches “People Also Ask” phrasing closely.
 - FAQ schema markup (4/10, **unconfirmed**) — likely the single highest-ROI fix available. Add `FAQPage` JSON-LD.
 - HowTo schema on admission steps (2/10, **missing**) — “6 Simple Steps” sections are a natural fit for `HowTo` rich results.
 - Duplicate FAQs across country pages (5/10) — fine if separate URLs; direct cannibalization if not (see 2.2).
-

7. Content & E-E-A-T — Score: 6/10

Signal	Status	Score /10
Real address & phone	Present	9
Years in business shown	Present	8
Named counselor credentials	Missing	1
Cited external sources	Missing	2
Independent review link	Missing	3
Fee accuracy disclaimer	Present	9
Social profiles linked	Present	8

8. Competitive & Ranking Snapshot — Score: 4/10

Live search for “**MBBS abroad consultants Delhi**” does not return `globaledge.net.in` on page 1. Current top results: Sulekha, GIEC Global, Axis Institute, MBBS Expert, IK MBBS Abroad, Global Medical Foundation, MediPedia Overseas, Seek MBBS Abroad.

Several of these have thinner content than this page already has — the gap is technical/authority, not content quality. Likely causes: the canonical/OG bug (2.1), possible content sprawl (2.2), and split brand authority (2.3).

9. Prioritized Action Plan

Fix immediately: 1. Replace all `yourdomain.com` placeholders (canonical, `og:url`, `og:image`). 2. Audit rest of site for the same bug. 3. Fix or remove dead # links. 4. Trim title tag length.

Fix this quarter: 5. Confirm/rebuild country & university pages as separately crawlable URLs. 6. Add `FAQPage` schema to all FAQ blocks. 7. Add `HowTo` schema to admission-process steps. 8.

Add BreadcrumbList, Organization, LocalBusiness schema. 9. Resolve “MedStudy Abroad” vs “Global Edge” brand inconsistency.

Fix for ongoing trust/depth: 10. Add named counselor bios with credentials/photos. 11. Cite sources (NMC, WHO, NTA, MoHFW) for all statistics. 12. Replace stock imagery; make alt text unique per image. 13. Add “last updated” dates to fee tables. 14. Link to an independent review platform.
